REFERRAL FOR FUNCTIONAL RESTORATION MULTIDISCIPLINARY EVALUATION

According to **ACOEM guidelines, page 114**, "research has shown that <u>multidisciplinary care is</u> <u>beneficial for most patients with chronic pain, and likely should be considered the treatment of choice</u> <u>for persons who are at risk for, or who have, chronic pain and disability</u>. **Flor et al. (1992)** conducted a meta-analytic review of multidisciplinary pain treatment for chronic back pain, which concluded that chronic pain patients treated in multidisciplinary programs were functioning better than 75% of control patients who either received no treatment or who were treated by conventional unimodal approaches."
